

[METHOD AND APPARATUS FOR PRODUCING CO-EXTRUDING PASTA]

Abstract of Disclosure

A method and apparatus for producing co-extruded pasta such as stuffed rigatoni and for providing the ability to make a plurality of end crimps with a single die. The method involves distributing pasta dough from an extruder to multiple co-extrusion die inserts that are arranged in a straight line. The straight-line design allows the co-extruded dough strands to drop directly into a single crimp/cut die that has a selected straight, angular or other cut. The invention may be adapted and utilized on any new or pre-existing pasta dough extruders.
